Parrot Ambassadors™
www.parrotlady.com

From: Indonesian Islands
Size: 18" long approx.
Food: Berries, seeds, nuts, fruits
Lifespan: approximately 40 years, in the wild unknown.
Status in the wild: Vulnerable
Suitability: Cockatoos love to snuggle and are very social, living in large flocks in the wild. With us, they can be very demanding and can get quite loud or even bite when they "grow up". It's important with this species to teach independent play or have another parrot buddy to occupy their time away from you.
